

Design for Manufacturing

Dr. Nageswara Rao Posinasetti

---

---

---

---

---

---

---

---

2. Mechanical Design Problems and Process

- Concurrent engineering relies on communication
- Communication depends on a shared understanding of terminology
- Define some of the terminologies that we should be using in this course.

January 14, 2008 Nageswara Rao Posinasetti 2

---

---

---

---

---

---

---

---

Decomposition of Mechanical Systems

- Mechanical – Parts and assemblies all mechanical in nature
- Electromechanical – mechanical and electronic
- Mechatronics – mechanical, electronic and software

January 14, 2008 Nageswara Rao Posinasetti 3

---

---

---

---

---

---

---

---

## Decomposition of Mechanical Systems

- Decomposing a product by parts is great for manufacturing, but design focuses on function
- Example of a mechatronic system – Automatic Camera and its shutter assembly

January 14, 2008

Nageswara Rao Posinasetti

---

---

---

---

---

---

---

---

## Decomposition of Mechanical Systems

- A system is a grouping of objects that perform a specific function
- Camera – is a photographic system to record images
- Shutter – control light coming through the lens
- Exposure system – auto focus system, light meter, controller and shutter system

January 14, 2008

Nageswara Rao Posinasetti

7

---

---

---

---

---

---

---

---

## Decomposition of Design disciplines

- Assemblies – Parts or Components
- Function of the system is decomposed first
- For the finest subsystems – develop components and assemblies

January 14, 2008

Nageswara Rao Posinasetti

8

---

---

---

---

---

---

---

---

Fig. 2-3 Decomposition of design disciplines

---

---

---

---

---

---

---

---

## Product function and behavior

- Function, Operation and purpose are used synonymously in relation to mechanical components
- Screw driver
- Handlebar of a bicycle
  - Steer the bicycle
  - Support the rider
  - Support the brake lever
  - Transform the gripping force

January 14, 2008

Nageswara Rao Posinasetti

10

---

---

---

---

---

---

---

---

## Product function and behavior

- Handlebar of a bicycle
  - Is part of a number of assemblies in performing all those functions
- In mechanical systems form enables function, and function determines form

January 14, 2008

Nageswara Rao Posinasetti

11

---

---

---

---

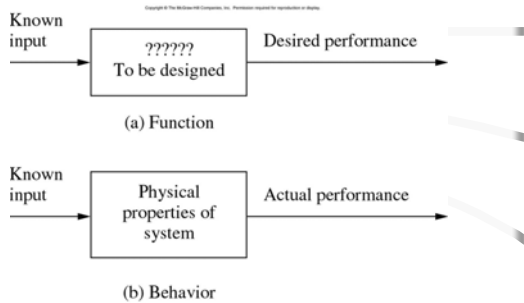

---

---

---

---

Fig. 2-4 Function and behavior

---

---

---

---

---

---

---

---

## Function and behavior

- Function is the desired output
- Behavior is the actual output
- Performance is the measure of function and behavior

January 14, 2008

Nageswara Rao Posinasetti

13

---

---

---

---

---

---

---

---

## Mechanical Design Problems

- There a number of approaches to design
- Selection design
  - Correct bearing from a catalog
- Configuration design
- Parametric design
- Original design
- Redesign

January 14, 2008

Nageswara Rao Posinasetti

14

---

---

---

---

---

---

---

---

## Selection design

- Choosing an item from a list of similar items
- Use catalogs

January 14, 2008

Nageswara Rao Posinasetti

15

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Configuration design

- Packaging design
- Subsystems are fully designed
- For example, Computer sub systems

---

---

---

---

---

---

---

---

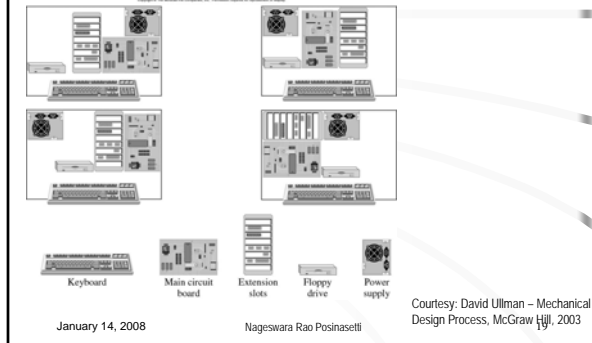

---

---

---

---

Fig. 2-6 Possible configurations for a computer

---

---

---

---

---

---

---

---

## Parametric design

- Use design equations, to get the solutions
- Design a cylindrical tank with a volume of 4 m<sup>3</sup>
- Volume =  $\pi r^2 l = 4$
- r = radius of the tank
- l = height of the tank

January 14, 2008

Nageswara Rao Posinasetti

20

---

---

---

---

---

---

---

---

## Original design

- Entirely new

January 14, 2008

Nageswara Rao Posinasetti

21

---

---

---

---

---

---

---

---

## Redesign

- Improvement or modification of an existing design
- Most design problems are redesign since they are based on prior, similar solutions. Conversely, most problems are original as they contain something new that makes prior solutions inadequate.

January 14, 2008

Nageswara Rao Posinasetti

22

---

---

---

---

---

---

---

---

- Bicycle design is well advanced by the end of 19<sup>th</sup> century. Not much changes since then in the conventional bike design

## Languages of Mechanical Design

- Semantic: verbal presentation
- Graphical: drawing of the object
- Analytical: equations, rules, etc.
- Physical: hardware of the object

## Design Refinement

- The process of making an object less abstract is called refinement

January 14, 2008

---

**Table 2.2** Levels of abstraction in different languages

Language	Level of abstraction		
	Abstract	→	Concrete
Semantic	Qualitative words (e.g., <i>long, fast, lightest</i> )	Reference to specific parameters or components	Reference to the values of the specific parameters or components
Graphical	Rough sketches	Scale drawings	Solid models with tolerances
Analytical	Qualitative relations (e.g., <i>left of</i> )	Back-of-the-envelope calculations	Detailed analysis
Physical	None	Models of the product	Final hardware

---

---

---

---

---

---

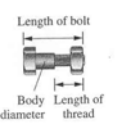

---

---

---

---

## Summary

- Decomposing a product by its form (i.e. components and assemblies) is great for manufacturing and assembly, but design focuses on function.
- Form enables function and function underlies form.

January 14, 2008

Nageswara Rao Posinasetti

34

---

---

---

---

---

---

---

---

## Summary

- Most design problems are redesign problems since they are based on prior, similar solutions. Conversely, most design problems are original as they contain something new that makes prior solutions inadequate.
- Design is the technical and social evolution of information punctuated by decision-making.
